

Vidscrip - Patient Journey Page

Overview

Having surgery is a journey with multiple “intersections” along the way (eg, “One Week Before Surgery”, or “Day After Discharge”). At each of these intersections critical information needs to be communicated to patients.

Vidscrips are videos recorded by healthcare providers and delivered to patients at key moments through these surgical journeys. Vidscrip can improve patient satisfaction, reduce cancellations and no-shows, and improve post-operative outcomes. With Vidscrips patients get the right content (videos), from the right source (their own doctor), and at the right time (based on a surgery date).

Currently, Vidscrips are delivered to patients through text messages which are scheduled based on the patient’s surgery date. A patient gets a message (e.g. SMS) with a link to the Vidscrip. But there is no visual “map” that shows the entire journey. It’s essentially a series of text messages in your messaging app’s inbox.

The **Patient Journey Page** will be a landing page for each patient who is enrolled in a journey. The landing page will be designed around a templated UX/UI (i.e. a line that maps interactive points representing key moments throughout a patient’s healthcare journey). The map will present ALL of the information a patient needs in a linear, time-based fashion. It will be the patient-centered hub for engaging with Vidscrip—cool!

Messages/reminders with links to the journey map will be sent to the patient via their preferred messaging source (eg, SMS, email, WeChat, WhatsApp, etc) to make sure they revisit the Journey Map at the right times in their care.

Functional Requirements

- Uses the Vidscrip SMS Airtable API (discuss w/ Foundry)
- Program Enrollment Landing Page 2.0
 - A redesigned vidscrip.com/enroll page that matches the UX/UI of the Vidscrip Journey Map
 - Redirects to the patient’s Journey Page after submission
- Patient Journey Page
 - An interactive “timeline” that maps out and contextualizes a patient’s journey

through a healthcare episode (e.g. Knee Replacement Surgery)

- UX/UI elements include
 - A line that represents the patient's journey from start to finish
 - The patient navigates their journey's timeline by interacting with points along it that represent key moments in the patient's healthcare journey
 - Interacting with a moment can result in ...
 - Watching their healthcare provider's Vidscrip content
 - Answering questions (e.g. "Did you have your surgery? [Yes] [No])
 - Linking to helpful websites
 - Downloading helpful resources
 - Patients' responses to questions can ...
 - Auto-enroll the patient into another journey (i.e. Patient responds "Yes" and is auto-enrolled into a Recovery program)
 - Rearrange the patient's key moments (e.g. the patient enters a new surgery date based on a rescheduling)
 - Allow Vidscrip to collect data (e.g. net-promoter scores)
 - A "You are here" icon that indicates where the patient is in the journey based on the current date and the surgery date (eg, an arrow or pointer, etc)
- The "You Are Here" indicator changes dynamically if the surgery date is changed by the patient
- A call-to-action to change the procedure/appointment date if the "you are here" doesn't look right

Overview & Functional Requirements

- Moment "Activator" icons that represent an opportunity for the patient to answer questions, click a link to a helpful website, download a helpful resource file
- Share Icons
 - Patient can share their Journey page with their friends and family
 - Share meta populates with the name of the Program, the Program Owner, and a cool image (W?)
 - Shortened link (vidsc.rip/[VidscripSmsAirtable.Enrollment._id])
 - Copy/paste-able anywhere
 - Social Media (Twitter, Facebook)
 - Email
 - Opens native email client (does not come from Vidscrip)
 - SMS/Text
 - Opens native messaging client (does not come from Vidscrip)
- Patient Journey Hub
 - A component of the Patient Journey Page
 - UI/UX elements include:
 - Program owner's (i.e. the patient's healthcare provider) profile photo, bio,

practice information

- Program title and description (and possibly some metrics)
- “About Me” button that when clicked/tapped opens the program owner’s “About Me” vidscrip
- Patient’s surgery/appointment date w/ a “Update” button the patient can use to modify their event date
 - NOTE: When the event date is updated, the timeline must update accordingly (this will be complicated)

Sample UX Workflow:

1. Patient enrolls in their doctor’s journey at vidscrip.com/enroll
 - a. Patient selects their doctor
 - b. Patient selects their program (aka “journey”)
 - c. Patient enters surgery/appointment date (when applicable—sometimes the date is “today”)
2. Upon enrollment, the patient is redirected to their Journey Map. The journey map visually lays out the entire journey and guides the patient through it.
 - a. Patient is asked to bookmark the page in their browser (when entering for the first time — localStorage)
 - b. Patient gets a tour of the journey map (when entering for the first time — localStorage)
 - i. Patient is shown how to update the surgery/appointment date if there are schedule changes
 - ii. Patient is asked to share their journey with friends/caregivers
3. Patient receives time-based messages/reminders instructing them it’s time to go back to their journey for a time-sensitive check-in (eg, at key intersections - 2 weeks before surgery, etc).
